FULL STACK SOFTWARE ENGINEER

PROFESSIONAL SUMMARY

Bilingual (English/Spanish) full stack software engineer with 7+ years building and shipping production web applications across FinTech and SaaS. Specializes in Angular, TypeScript, and .NET WebAPI, with working depth in React and PostgreSQL. Leads features end to end, from technical design through implementation, testing, and release, including lending, payments, and identity verification products used in regulated financial workflows. Measures before acting: recently cut mobile page weight up to 60% across the company's consumer sites by root causing a third party script problem. B.S. Software Engineering, Western Governors University (Aug 2026).

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Angular, React, Redux, C#, .NET, HTML, CSS, SASS, jQuery

Back End & APIs: .NET Core, WebAPI, Node.js, Express, PostgreSQL, T SQL, REST, GraphQL (familiar)

Web Performance: Google Tag Manager, Lighthouse, Core Web Vitals, third party script optimization, SEO

UI/UX Development: Responsive UI, Accessibility (WCAG), cross browser compatibility, Material UI, Bootstrap

Tools & Collaboration: Git, GitHub, Bitbucket, Postman, Jira, Confluence, Agile/Scrum

Integrations: Third party identity verification (Jumio), real time payments, banking partner APIs

AI Assisted Development: Claude, ChatGPT, Cursor, used daily for development, debugging, and code review

PROFESSIONAL EXPERIENCE

Softwise **Lehi, UT**

Software Engineer *Jan 2023 – Present*

Frontend Developer *Mar 2021 – Jan 2023*

Own end to end delivery of features for FinTech web applications built on Angular and .NET WebAPI, from technical design through implementation, testing, and production release.

- **Page performance:** Cut mobile page weight 45 to 60% and Total Blocking Time 53 to 62% across the consumer lending website and members portal by replacing an always loaded third party chat SDK with click to load delivery through Google Tag Manager, after building a scripted Lighthouse benchmark to prove the gain; also locked the paid live agent chat to company domains and fixed broken header chat icons.
- **Lead funnel:** Led front end integration of a lead ingestion funnel that captures, validates, and routes prospective borrower data directly into the loan application pipeline.
- **Identity verification:** Led front end integration of Jumio, adding automated document and biometric identity verification to the customer onboarding flow.
- **Real time payments:** Built the front end for real time payment processing in partnership with Zions Bank, enabling instant transaction handling within the platform.
- **Title loans:** Delivered the complete front end flow for a new title loan product, from application intake through submission.
- Partner with product managers, UX designers, and backend engineers to scope and deliver scalable, maintainable solutions.
- Built and standardized reusable Angular components and design system patterns, improving accessibility (WCAG) and visual consistency across the product suite.
- Strengthen application performance and code quality through consistent code review, refactoring, and cross browser testing.
- Mentor junior developers through peer review, pairing, and technical knowledge sharing.

BrightBridge Web **Provo, UT**

Software Engineer / Project Manager *Jan 2019 – Mar 2021*

- Delivered full stack SaaS platforms for client engagements using React, .NET, and PostgreSQL.
- Built the complete backend API for a note taking application on Node.js and Express.
- Led end to end project execution and served as primary technical contact for client stakeholders, managing scope, timelines, and delivery.
- Improved performance and search visibility for high traffic applications through front end optimization and SEO best practices.

CERTIFICATIONS

ITIL® 4 Foundation, PeopleCert — Oct 2025
CompTIA Project+, CompTIA — Jun 2025
